### C. AMENDMENTS TO THE CLAIMS

In order to better assist the Examiner with the prosecution of the case, the current pending claims have been included in their entirety for which reconsideration is requested.

1. (Original) A method for controlling personal information of a user using a client computer system enabled to be communicatively connected to a plurality of network entities in a network environment, comprising:
  - storing personal information of the user at the client computer system;
  - receiving a request from a first network entity to send the personal information stored at the client to at least one other network entity;
  - enabling the at least one other network entity to be selectable by the user;
  - enabling the personal information to be edited; and
  - sending the edited personal information from the client computer system to each of the selected ones of the at least one other network entity.
2. (Original) The method of claim 1 wherein enabling the personal information to be edited further comprises enabling the personal information to be separately edited for each selected ones of the at least one other network entity.
3. (Original) The method of claim 1 further comprising watermarking the edited personal information before sending the personal information.
4. (Original) The method of claim 2 further comprising:
  - uniquely watermarking each one of the separately edited personal information before sending each of the separately edited personal information to each selected ones of the at least one network entity.

4

PATENT  
09/920,522

5. (Original) The method of claim 1 further comprising receiving an indication of a remuneration from the first network entity in response to sending the edited personal information to selected ones of the at least one network entity.

6. (Original) The method of claim 1 wherein receiving a request further comprises receiving, with the request, a financial incentive to comply with the request.

7. (Currently Amended) A method of a web server participating in a distribution of personal information of a user in a network environment, comprising:

receiving, at a web server accessed by a user from a client system over a network, initial personal information from the user over [[a]] the network;

sending a request from the web server to the user requesting the user [[to]] send the initial personal information of the user to at least one other specified network entity;

sending, with the request, an indication of a financial incentive to comply with the request; [[and]]

receiving, at the web server, a copy of the user personal information sent to the at least one other specified network entity from the user;

comparing, at the web retailer, the received copy of the user personal information with the received initial personal information; and

sending a remuneration, based on the comparison, from the web server to the user for complying at least in part with the request.

8. (Cancelled).

9. (Currently Amended) The method of claim 8 further comprising:

receiving, at the web server, a first remuneration from each of the at least one other specified network entity to which the user personal information was sent.

PATENT  
09/920,522

10. (Currently Amended) A method of participating in a distribution of personal information of a user in a network environment, comprising:
- receiving, at a second network entity, personal information of the user from the user client system with an indication of a requesting network entity that requested the user send the second network entity the personal information; and
  - sending, from the second network entity, a [[second]] remuneration to the indicated requesting network entity in response to receiving the personal information from the user client system.
11. (Original) A data processing system, comprising:
- a communications device enabling communication over a network;
  - a first memory having a set of instructions;
  - a second memory having personal information of a user;
  - a processing unit executing the set of instructions in the first memory to enable receipt of a request from a first network entity through the communications device to send the personal information stored in the second memory to at least one other network entity; to enable the at least one other network entity to be selectable by the user; to enable the personal information to be edited; and to send the edited personal information to each of the selected ones of the at least one other network entity.

PATENT  
09/920,522

12. (Original) A computer system enabled to be communicatively connected to a plurality of network entities in a network environment, comprising:

means for storing personal information of a user;

means for receiving a request from a first network entity to send the stored personal information to at least one other network entity;

means for enabling the at least one other network entity to be selectable by the user;

means for enabling the personal information to be edited; and

means for sending the edited personal information to each of the selected ones of the at least one other network entity.

13. (Original) The system of claim 12 further comprising means for watermarking the edited personal information before sending the personal information.

14. (Original) A computer system enabled to be communicatively connected to a plurality of network entities in a network environment, comprising:

means for receiving initial personal information from a user from a client system over a network;

means for sending a request to the user at the client system requesting the user to send the initial personal information of the user to at least one other specified network entity from the client system;

means for sending, with the request, an indication of a financial incentive to comply with the request; and

means for receiving a copy of the user personal information sent from the client system to the at least one other specified network entity from the user.

means for comparing the received copy of the user personal information with the received initial personal information; and

means for sending a remuneration, based on the comparison, to the user for complying at least in part with the request.

15. (Cancelled).
16. (Original) The computer system of claim 15 further comprising:  
means for receiving a second remuneration from each of the at least one other specified network entity to which the user personal information was sent.
17. (Currently Amended) A computer system enabled to be communicatively connected to a plurality of network entities in a network environment, comprising:  
a network entity communicatively connected within the network comprising  
means for receiving personal information of a user from the user client system via the network with an indication of a requesting network entity that requested the user send the network entity the personal information; and means for sending a remuneration to the indicated requesting network entity in response to the received personal information.
18. (Original) A computer program having computer readable instruction code means on a computer usable medium, comprising:  
instruction means enabling a storing of personal information of a user;  
instruction means enabling receipt of a request from a first network entity to send the stored personal information to at least one other network entity;  
instruction means for enabling the at least one other network entity to be selectable by the user;  
instruction means for enabling the personal information to be edited; and  
instruction means for sending the edited personal information from the client computer system to each of the selected ones of the at least one other network entity.
19. (Original) The computer program of claim 18 further comprising instruction means for watermarking the edited personal information before sending the personal information.

20. (Currently Amended) A computer program having computer readable instruction code means on a computer usable medium, comprising:

instruction means for enabling receipt of initial personal information from a user from a client system over the network;

instruction means for sending a request to the user at the client system requesting the user to send the initial personal information of the user to at least one other specified network entity from the client system;

instruction means for sending, with the request, an indication of a financial incentive to comply with the request; [[and]]

instruction means for enabling receipt of a copy of the user personal information sent from the client system to the at least one other specified network entity from the user;

instruction means for comparing the received copy of the user personal information with the received initial personal information; and

instruction means for sending a first remuneration, based on the comparison, to the user for complying at least in part with the request.

21. (Cancelled)

22. (Original) The computer program of claim 21 further comprising:

instruction means for enabling receipt of a second remuneration from each of the at least one other specified network entity to which the user personal information was sent.

23. (Currently Amended) A computer program having computer readable instruction code means on a computer usable medium, comprising:

instruction means for enabling receipt at a network entity communicatively connected to a network of personal information of a user from the user client system with an indication of a requesting network entity that requested the user client system send the network entity the personal information; and

instruction means for sending a remuneration to the indicated requesting network entity in response to the received personal information from the client system.
